The next phase

The next phase in the Cairo Chamber of Commerce needs a powerful board of directors, who should have developmental trend, keeping up with the global economic incidents.

Furthermore, the board should discuss the trader problems openly and put forward positive views, promoting the Egyptian economic march.

The coming board should give more time for discussing key issues topped by the commercial fraud, which increased significantly during the past period, causing serious damage to traders and producers.

It is admitted that the Cairo Chamber of Commerce has to play a greater role in resolving disputes, whether between traders and government authorities such as; income tax authority, Customs and other bodies or among traders, since the Chamber, as a public corporation, has set a mechanism for arbitration in such disputes.

This mechanism is compulsory, so it helps traders to save time, money and efforts and ease crises facing them. Hence, it leads to getting out of the cripple crisis.

Such mechanisms contribute, certainly, to protest case decline in the coming period, as the Cairo Chamber of Commerce provides traders with services and helps cripplers appropriately, in order to prevent them to slip into cripple and keep the march of trade.

We hope that the Cairo Chamber of commerce increases in the next phase its contributions to the General Federation of Chambers of Commerce commensurately with its capacity and strength versus other ones, as it composed of 60% of traders at the republic level, so it represents a broad base of merchants.

Hence, its contributions should match the proportion of merchants, who have honor to belong to it. This matter would result in upgrading trade and investment activities, thus major economic indicators will be fulfilled in turn.

Furthermore, it would alleviate recession, which has still controlled all commercial sectors at markets.

It's time for ending such recession at markets by taking a series of measures aimed at providing merchants and consumers with all services.
